

**A Table shewing the true value of the Hundred, and the halfe Quarter of Haperdepois weight: at any price whatsoever, this being observed, that if the price of the Hundred weight be not exprest in any one summe, then to adde such two summes together as will make the even price thereof, or else such two summes as come neereest to it. As for example, if you would know at 1 pound 16 shillings the Hundred weight, what cost the pound? looke in the Table for 1 pound 15 shillings (which is the neereest to it) whereunto adde the first summe in the Table, which is 1 shilling 2 pence, and it will appeare that 1 pound 16 shillings the hundred weight, will cost 3 pence 3 farthings halfe farthing the pound wanting 2 pence in the hundred weight. The like may speedily be done after this manner for any other price.**
